Summer
Camp

Ages 6-12

The **VISION** Development Team

Handwriting

Our ability to write words is contingent to our ability to translate image in our mind into a word on a page.

Difficulty with written expression is a common problem in individuals with poor eye movement skills, poor visualization abilities, and lack of visual dominance.

Since writing is part of the daily life of school aged children, children who do not have these skills often have to adapt by relying on another sensory system such as auditory or hearing.

Our handwriting camp will help improve pencil grip, hand/eye coordination, develop finger coordination, and focus on correct use of lowercase letters in words and sentences, and spacing and alignments of letters.

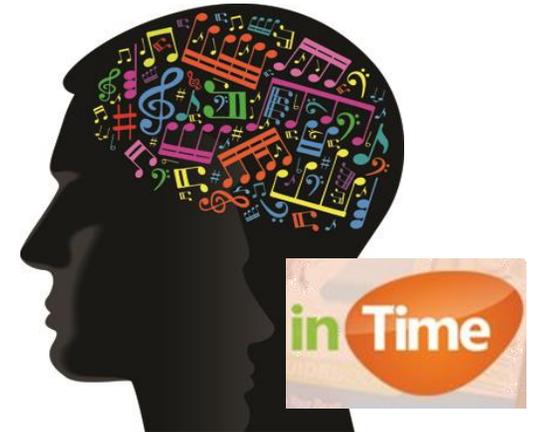

Sports Vision

Bring it on! Up Your Game!

- » Develop tracking and focusing
- » Enhance peripheral vision and acuity
- » Lots of games and activities
- » Train like the pros

"Optometric Vision Therapy made a big difference in my life and my career. I was fortunate that my vision problems were caught early in life. Learning-related vision problems can have a serious impact on a child's education. Don't wait, take action today!"

Larry Fitzgerald
Arizona Cardinals
2008 NFC West Champions' wide receiver

Visual Beats

Everday skills such as reading, writing and comprehension require strong brain connections between the visual and auditory systems.

Visual Beats camp focusses on building these visual-auditory connections through rhythmical music and movement activities.

The Vision Development Team is proud to offer inTime auditory processing by Advanced Brain Technologies, as part of your child's summer camp experience.

Your child will have fun tapping out rhythms on a drum while reducing stress, improving coordination, building self esteem; and while making sensorimotor connections necessary for success in sports, academics, and social development.
